

KINETIC LIGHTS Winch LED Lighting System

The **KL700 Winch LED Light** allows for dynamic breathtaking lighting designs both on performing art stages and public spaces. The DMX controlled winches lift lighting bars or spheres up and down in groups of tens, or even hundreds, to create the ultimate 3D lighting show.

The specific winch comes with different lifting heights to suit different venue situations. KL700 supports 9 or 10 DMX channels depending on the LED light attached, allowing the lighting designer to set the colour of the lighting fixtures, their height and lifting speed. The range of lifting height is 1.5m to 12m so these fixtures can be used in many spaces from shopping centers to sports arenas to create stunning shows, for both permanent installations and live events.

Technical Specifications:

Lifting Range	0-3M, 0-6M, 0-9M, 0-12M
Lifting Speed	0-0.8M/s
DMX Channel	9, or 10
LED Light	RGB or RGBW Optional
	Standard Shape and Size: Sphere with diameter of 120MM, 150MM, 200MM, 250MM or 300MM. Customized lighting fixtures possible.
Net Weight	5.6Kg, excluding LED light
Dimensions	286X236X145MM
Electrical	100W @ 240V 50/60Hz
